- CI to fix gaps
- Resourced action plans
- Roles, Responsibilities and accountability

Aligning Process Goals with Key Customer Requirements

Inventory Management Services

Efficiency in effective inventory management will always give a competitive edge to the business, regardless of its nature. With effective control and management over inventory stock, as well as accurate visibility and fast efficient fulfilments, comparative pricing can be given on a customer-to-customer basis.

To Maintain the inventory efficiently and effectively we follow the following steps:

Getting Control of Your Inventory

The first step we follow is getting the control of your inventory. This is done because unless we know what inventory is in your ware house, whether that material remains in usable condition, we cant properly determine reorder products.

Plan your inventory

One of the very important things in Inventory Management is planning the inventory. We plan your inventory beforehand. We organize the movement of new goods and work-in-process as per a well thought out schedule. Ideally, we make new goods come on to the shelves well before the last piece is sold out.

Inventory Management Services

Balance stock levels

Inefficient management of inventory could easily dampen profits. So we will consider market and budget related issues while determining ideal stock levels that optimizes inventory such that it does not result in excessive carrying costs, yet satisfies market demand.

Improve the Accuracy of Your Forecasts.

We have the ability to develop accurate demand forecasts for your stock products which will empower you to do more with less.

Maintaining Stock in your Branch Locations.

In order to make your multi-location distribution organization successful, we will make sure that all your branches provide an equal level of service to the home office. The key to accomplishing this feat is to ensure that your branches are all appropriately stocked.

Inventory Management Services

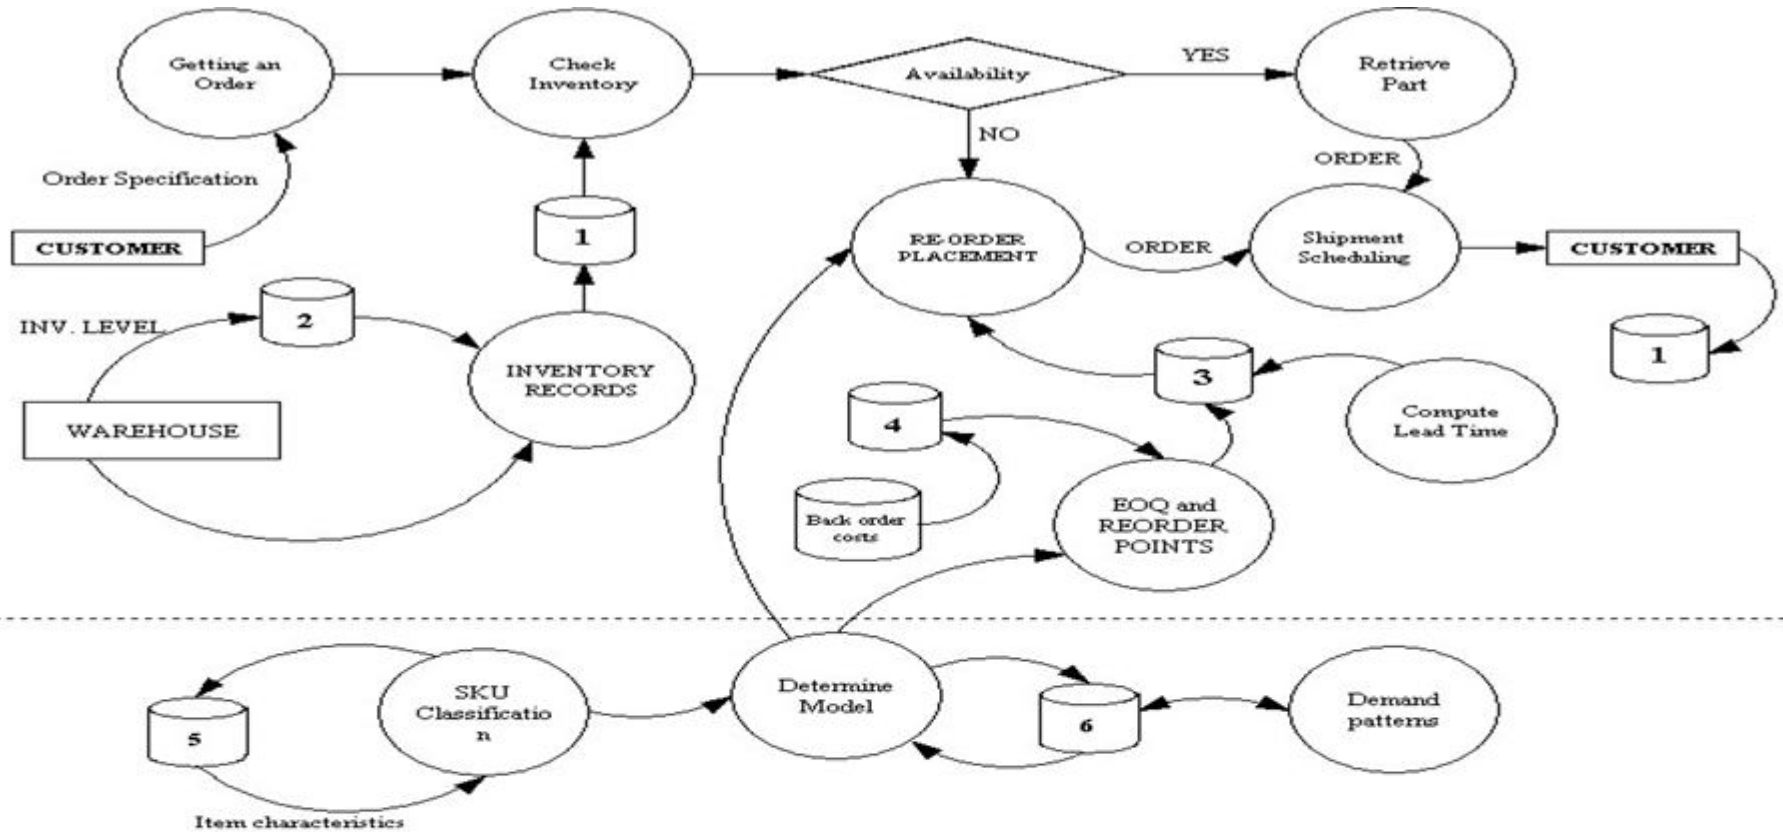

Follow-up and control the inventory

We Will take charge of checking the figures and reviewing the items in your store. This will help you make correct decisions about the disposal, replacement or discontinuance of different elements. We bear in mind that the market demand for some products can change suddenly and quick corrections might have to be made.

Achieve Effective Inventory Analysis

We closely monitor the performance of your inventory investment. With solid inventory analysis, we can ensure you that you are investing in the right amount of the right products to remain competitive.

Inventory Management – Data Flow Diagram

- 1** HISTORICAL DATA (No. of items, delivery date, shipment details)
- 2** Inv levels, warehouse records, location
- 3** Type of model, EOQ, Lead time, Stock out history, historical data etc

- 4** Carrying cost, Annual usage, order processing cost, back order cost
- 5** Key factors: Vol. flow rate, Size etc
- 6** Demand Patterns- seasonal demands etc

Consystem Activities

Consistent Activities	Inputs from Clients / Remarks
Sales Order Entries	Sales Orders from Clients (Order Emails can sent or Scanned copy can be emailed to Consistent)
Stock Verification & Updates	<ul style="list-style-type: none"> <input type="checkbox"/> Daily Stock reports from Warehouses <input type="checkbox"/> Scanned copies of Delivery Challans/Slips to Consistent
Purchase Order Creation	<ul style="list-style-type: none"> <input type="checkbox"/> Consistent can create PO's based on Sales Orders or Re-Order levels of Products/Parts/Items in the Warehouses <input type="checkbox"/> Consistent can also take decisions based on History data (E.g. Product/Item demand during Festival seasons)
Creation of Dependant POs	If an Order fulfillment involves ordering some parts/items to pack the product, Consistent will track and place orders with the Suppliers for those items as well.
Re-Order Level Maintenance & Placing PO's for items going below Re-Order levels.	Stock Reports from Warehouses
Schedule Pickup & Delivery (Consistent can send emails and call if needed to schedule the Pick up and Deliveries)	Consistent needs Contact details of the delivery company
Sales Order Fulfillment on time	<ul style="list-style-type: none"> <input type="checkbox"/> Consistent will track the Purchase Orders against the Sales Orders Issued by clients and ensure timely delivery <input type="checkbox"/> Consistent would need emails/confirmations from vendors/manufacturers. Even better if we get to coordinate with them.

Smart Inventory Management - Advantages

- ❑ Using smart inventory management, you can stay ahead of the demand curve, keep the right amount of products on hand and plan ahead for seasonal changes. This goes back to keeping your customers happy all year long.
- ❑ Good inventory management helps you figure out exactly how much inventory you need. This makes it easier to prevent product shortages and keep just enough inventory on hand without having too much.
- ❑ In addition to cutting down on operating costs, it will also bring satisfied customers back for more businesses in the near future.
- ❑ If you have multiple locations, then inventory management becomes even more important because you need to coordinate your supplies at each location depending on differences in demand and other factors
- ❑ Inventory management is a great time-saving tool. By keeping track of all the products you have on hand and on order, you can save yourself the hassle of doing inventory recounts to make sure your records are accurate.
- ❑ When your inventory is humming along efficiently through your facilities, you can bet you'll save a lot of money. Inventory management helps you avoid wasting money on slow-moving products so you can put it to better use in other areas of your business.
